

DEVELOPED WORLD EQUITY SUSTAINABILITY DISCLOSURE

SUMMARY

This financial product promotes environmental or social characteristics but does not have as its objective sustainable investment.

This Fund specifically aims to:

1. Reduce the impact of the Fund on Climate Change (relative to the appropriate broad market benchmark)
2. Increase the Fund's exposure to companies with improved sustainability and lower ESG risk scores (relative to the appropriate broad market benchmark)

The Fund follows the Solactive ILIM Sustainable Developed Market Equity Index. This Index is designed to deliver equity market returns with enhanced exposure to more sustainable companies and a better alignment to the low carbon transition economy.

The estimated proportion of equities which promote environment and social (E/S) characteristics is circa 95%.

The Fund is a passive product and invests in developed market equities and may carry a small cash balance for liquidity purposes while the Fund may have exposure to derivatives such as futures. The promotion of environmental or social characteristics are applied across the Fund's equity investments. The Fund is classified as Article 8 under SFDR regulation.

ILIM relies on third party ESG data from Sustainalytics. Sustainalytics have developed methodologies to assess companies' ESG credentials. ILIM utilises the ESG data from Sustainalytics to monitor the E/S characteristics of the Fund.

The E/S characteristics of the Fund are reported periodically to internal executive committees.

ESG data is provided for the underlying holdings with each security having a series of ESG indicators. The indicators used to measure the promotion of the E/S characteristics of the Fund are carbon intensity, fossil fuel involvement and ESG risk score.

There are limitations regarding ESG data and some available ESG data is based off estimated data due to the lack of publicly disclosed information.

ILIM utilises ESG data to take into account sustainability factors including a number of principle adverse impact ("PAI") indicators. The E/S characteristics promoted by the Fund are monitored to assess if these E/S characteristics have been attained.

The Fund engages in active ownership and actively engages with companies to improve their E/S characteristics. The Fund also uses its voting power to vote to promote E/S characteristics. The fund manager of the Fund, ILIM, has an active ownership programme, which ILIM enacts on behalf of the Fund. ILIM also tackles many specific environmental and social characteristics through engagement activities, either directly with companies or collaboratively with other investors. Engagement topics include transition climate risks such as physical climate risks, biodiversity, water, waste, human-rights, supply-chain labour standards, modern slavery, anti-discrimination, anti-corruption and ESG risk.

The Fund follows a passive strategy and aims to replicate the reference benchmark. The reference benchmark is designed by ILIM in co-ordination with the benchmark provider, Solactive, and is designed to promote the E/S characteristics of the Fund. It is a rules based benchmark which integrates ESG data to ensure the reference benchmark is continuously aligned with the E/S characteristics promoted by the Fund. The broad market index does not consider the promotion of E/S characteristics and is weighted based on market capitalisation.

NO SUSTAINABLE INVESTMENT OBJECTIVE

This Fund promotes environmental and/or social characteristics but does not have a sustainable investment objective.

While this Fund is designed to consider and contribute to the sustainability of our environment and society within the provisions of Article 8 of the SFDR, it is not specifically designed to make "sustainable investments" as defined under SFDR or to make investments which qualify as "environmentally sustainable" under the EU Taxonomy.

ENVIRONMENTAL OR SOCIAL CHARACTERISTICS OF THE FINANCIAL PRODUCT

This Fund specifically aims to:

- Reduce the impact of the Fund on Climate Change (relative to the appropriate broad market benchmark);
- Increase the Fund's exposure to companies with improved sustainability and lower ESG risk scores (relative to the appropriate broad market benchmark).

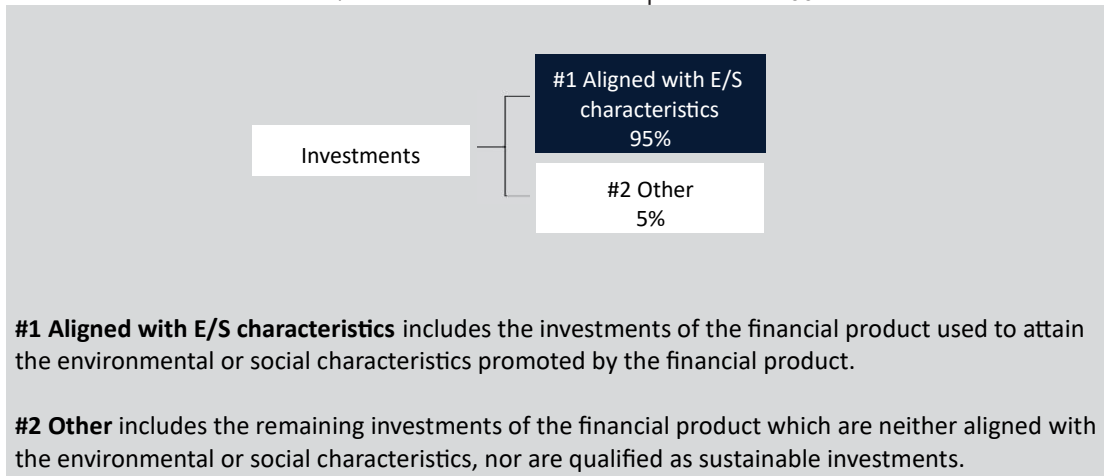

INVESTMENT STRATEGY

The Fund is a passive product that tracks a developed market equity index. The Fund promotes environmental and social characteristics alongside other factors (Article 8 of the SFDR).

As part of its active ownership program the Investment Manager will selectively engage (either directly or collaboratively with other like-minded investors) with companies in which it invests to support and encourage the adoption of positive sustainable behaviours within these companies. The Investment Manager exercises its voting rights, voting the shares of companies in this product, with the exception being where voting is logistically difficult or where the costs of voting are disproportionate relative to the size of the holding.

PROPORTION OF INVESTMENTS

The Fund invests in developed market equities and may carry a small cash balance for liquidity purposes. The Fund may make an allocation to "Other" investments which may comprise of a small cash balance for liquidity purposes or derivatives such as futures. However, in normal market conditions, the Investment Manager expects the investments used to meet the environmental and/or social characteristics is equal to circa 100%.

MONITORING OF ENVIRONMENTAL OR SOCIAL CHARACTERISTICS

The Fund manager relies on third party ESG data from Sustainalytics. Sustainalytics have developed methodologies to assess companies' ESG credentials. companies are assigned sustainability related scores based on their activities and ESG credentials.

The Fund Managers utilises the ESG data from Sustainalytics to monitor the E/S characteristics of the Fund. The agreed environmental and social indicators used to measure the attainment of the characteristics promoted by the product are independently monitored by ILIM's Investment Risk team at a Fund level. The E/S characteristics of the Fund are reported periodically by the Fund manager's Investment Risk team to the Fund Manager's Responsible Investing Governance committee and the Fund Manger's board. Exceptions are highlighted and addressed where appropriate.

METHODOLOGIES

The extent to which environmental and social characteristics promoted by the Fund are met, these are measured using a series of aggregated metrics using data from our third party data provider Sustainalytics.

The Fund is a passive product which promotes E/S characteristics. ESG data for the underlying holdings is available through our third-party ESG data provider Sustainalytics with each security having a series of ESG indicators.

A weighted average score of the underlying holdings is calculated for each of the E/S characteristics promoted by the Fund. The weighted average scores are used to demonstrate how environmental and social characteristics promoted by the Fund are met.

DATA SOURCES AND PROCESSING

ILIM, as fund manager, obtains the data and evaluates each of the E/S characteristic promoted from our chosen ESG data provider, Sustainalytics (<https://www.sustainalytics.com>). Sustainalytics is a market leader in the provision of ESG data.

Sustainalytics provide ESG data on the environmental and social characteristics promoted by the Fund. ESG data is sourced from Sustainalytics for the individual company holdings of the Fund for each of the indicators which monitor the environmental and social characteristics. ILIM as Fund manager of the Fund, monitor the quality of data received and companies which have environmental/social scores that are judged to be outliers within the Fund are reviewed against other third party data providers and if necessary, queried with Sustainalytics.

For the Fund's investments, each indicator to assess the impact of the environmental and social characteristic promoted by the Fund is calculated for each individual security using a weighted average of the Sustainalytics data score for the individual metrics, and these are then aggregated to determine the overall product score.

A formulaic expression of the calculation is below:

Individual company score = Weight of security in portfolio * Sustainalytics score for the individual sustainable metric
 Fund score for sustainable metric = Sum of individual company scores held in the Fund

ESG data and metrics attributed to the environmental and social characteristics promoted by the Fund will contain estimated data due to a lack of public disclosure by individual companies. As the requirements to report ESG data differ between jurisdictions, and as many companies are only starting to produce ESG measurements themselves, a significant portion of the data is estimated by our ESG data provider Sustainalytics. Gaps in corporate disclosure are partially filled with the help of Sustainalytics' estimation models (e.g. targeting GHG emissions) to provide a fuller picture of the

portfolio's impacts. Disclosure of ESG data is improving over time with more companies publicly disclosing ESG related data.

LIMITATIONS TO METHODOLOGIES AND DATA

As mentioned, there are limitations regarding both methodologies and data. For some equities ESG data is unavailable due to the lack of publicly disclosed information. In these instances estimated ESG data is used.

Gaps in corporate disclosure are partly filled with the help of Sustainalytics' estimation models (e.g. targeting GHG emissions) to provide a more complete picture of the portfolio's impacts.

For equities where ESG data is not directly available, these are not included in the calculation. Disclosure of ESG data is improving year and year with more companies publicly disclosing data to support the environmental and social characteristics promoted by the Fund

DUE DILIGENCE

ILIM utilises independent third-party ESG data to take into account sustainability factors including a number of PAI indicators. ILIM integrates the ESG data into the investment decision making process to reduce the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Using ESG data from our third-party provider, ILIM excludes investee companies in breach of international principles such as:

- > The OECD Guidelines for Multinational Enterprises
- > The UN Guiding Principles on Business and Human Rights
- > The Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work
- > The International Bill of Human Rights

When assessing the environmental and social characteristics of the underlying assets of the financial products, ILIM incorporates ESG data into the investment decision making process. For Article 8 designated funds, this includes assessing the underlying securities from an environmental and social characteristics viewpoint to ensure E/S characteristics are promoted by the product. The E/S characteristics promoted by Article 8 funds are monitored to assess if these E/S characteristics have been attained.

ENGAGEMENT POLICIES

The Fund engages in active ownership and actively engages with companies to improve their environmental and sustainable characteristics. Additionally, the Fund uses its voting power to promote environmental and sustainable characteristics. The Fund manager, ILIM, has an active ownership programme, which ILIM enacts on behalf of the Fund.

The active ownership programme focuses on core ESG themes, which can be categorised under two mega themes: decarbonisation and a trend to a more stakeholder centric business model concentrating on four priority thematic areas: climate change, natural capital, human rights and corporate governance.

ILIM's new bespoke voting guidelines promote environmental and social characteristics through two mechanisms:

- > Shareholder proposal support: Through ILIM's progressive voting policy aligned with ILIM's four priority thematic areas, we support well-constructed ESG shareholder proposals across the environmental and social characteristics the Fund promotes.
- > Voting action against directors: ILIM's bespoke guidelines vote against directors on companies with low gender & ethnic board diversity, companies without independent leadership and companies underperforming on climate oversight, strategy and action.

In addition, our voting guidelines integrate direct voting action against companies on non-discretionary portfolios that would fall under ILIM's Exclusion Policy, including companies with UN Global compact breaches, severe controversies, controversial weapon exposure, production/generation of highly polluting fossil fuels (thermal coal, oil sands, arctic oil) among others. This is further strengthened by ILIM's bespoke policy incorporating voting action against unresponsive companies that ILIM are engaging with on a variety of environmental and social topics.

ILIM also tackles many specific environmental and social characteristics through engagement activities, either directly with companies or collaboratively with other investors. Engagement topics include transition climate risks, physical climate risks, biodiversity, water, waste, human-rights, supply-chain labour standards, modern slavery, anti-discrimination, anti-corruption and ESG risk.

DESIGNATED REFERENCE BENCHMARK

The Fund follows a passive indexation strategy and aims to replicate the reference benchmark. The reference benchmark is designed by the Investment Manager in co-ordination with the benchmark provider, Solactive, and is designed to promote the E/S characteristics of the Fund. The reference benchmark is called the Solactive ILIM Sustainable Developed Market Equity Index.
